Profile

Software engineer and QA Lead with hands-on experience across QA strategy, production debugging, CI/CD support, infrastructure operations, system integration, and project coordination. I enjoy turning repeated operational pain into traceable workflows, internal tools, documentation, and automation.

Core Strengths

- Root-cause analysis across logs, APIs, databases, deployment changes, network behavior, and system boundaries.
- QA process improvement, risk assessment, test design, defect tracking, and cross-functional communication.
- Infrastructure and DevOps support using Linux, Jenkins, Docker, DNS, TLS, Zabbix, WAF, Git, Bitbucket, and Jira.
- System integration experience with REST APIs, SOAP, PostgreSQL, Oracle, and production troubleshooting.
- Builder mindset: convert vague ideas into practical architecture, implementation plans, and maintainable workflows.

Technical Stack

Linux Java Jenkins Docker PostgreSQL Oracle REST API SOAP TLS DNS
WAF Zabbix Git Bitbucket Jira Automation

Current Work

Software Engineering / QA / Infrastructure Support

Current responsibilities

- Support QA planning, defect investigation, production issue analysis, CI/CD troubleshooting, and system integration.
- Coordinate between business requirements, engineering implementation, QA verification, and infrastructure constraints.
- Improve repeatable workflows for testing, deployment checks, incident triage, and knowledge reuse.

Selected Projects

QA Automation & Internal Tooling

Exploring tools that connect Jira, Git differences, test case generation, and reusable QA knowledge so repeated QA work becomes easier to trace and reuse.

Self-hosting Lab

Maintaining personal infrastructure across Raspberry Pi, Oracle Cloud, Ubuntu, Windows, Docker, Jenkins, Nextcloud, Portainer, OpenProject, WireGuard, Ollama, and Zabbix.

PHP + yt-dlp Downloader

Personal side product focused on UX, caching, rate limiting, and possible monetization experiments.

Direction

I want to build useful products, become more location independent, and keep improving through automation, infrastructure, product thinking, and practical engineering depth.
